46-year-old male patient complaining of fever, cough and fatigue.

Two axial images of the plain chest CT scan are shown.
1. What is the salient abnormality?

- Bilateral segmentary atelectasis
- Pleural effusion
- Cardiomegaly
- Bilateral ground glass opacities
- Pleural thickening

2. Based on the clinical information and CT images, what is the most likely cause of the pulmonary lesions?

- COVID-19 pneumonia
- Alveolar-cell carcinoma
- Pulmonary fibrosis
- Pulmonary sarcoidosis
